Professional Summary

Junior AI Engineer with hands-on experience building RAG systems (FAISS + BM25 hybrid search, LangChain) and natural-language-to-SQL interfaces. Skilled in Python, Docker, and Hugging Face Transformers, with experience deploying full-stack apps (FastAPI). Data Science graduate, University of Jordan, passionate about building real-world AI products.

Education

University of Jordan
BS in Data Science

Amman, Jordan
Feb 2021 – Jul 2025

Experience

Data Analytics & AI Intern

Jordan Mobile Telecom Services Company “ZAIN”

Amman, Jordan
Jul 2024 – Sep 2024

- Extracted, cleaned, and transformed large-scale business datasets—including employee salaries, mall visitor traffic, and customer churn records—using SQL and Python, ensuring data quality and consistency for downstream analytics and modeling.
- Designed and deployed interactive Power BI and Tableau dashboards to visualize key business metrics, automating recurring reports and enabling stakeholders to make faster, data-driven decisions.
- Built automated Python preprocessing pipelines to handle missing values, outliers, and feature transformations, and contributed to feature engineering for churn prediction and other machine learning use cases.
- Collaborated with the data analytics team to translate business requirements into structured data workflows, gaining hands-on exposure to the full data lifecycle from raw extraction to actionable insight.

Projects

ContextIQ (Multi-Format RAG Platform)

Architected a full-stack RAG platform (FastAPI, React, LangChain) with hybrid FAISS + BM25 retrieval and multi-turn conversational memory with query rewriting, supporting PDF, DOCX, CSV, TXT, and Markdown ingestion. Extended the platform with a **natural-language-to-SQL interface** for querying external databases (PostgreSQL, MySQL, SQLite), and secured the system with **JWT authentication and per-user data isolation**.

MediCheck (Graduation Project)

Built and deployed an ML pipeline to classify medicines by side effects, applying PCA and training **SVM, Random Forest, Decision Tree, and Naive Bayes** models, with the best model served via Flask and a React interface.

Customer Churn Prediction Dashboard (ZAIN Internship)

Developed an end-to-end churn prediction solution on **7,043 customer records**, benchmarking six ML models (Logistic Regression, SVM, Decision Tree, Random Forest, XGBoost, Soft Voting Ensemble) and deploying an interactive real-time Streamlit dashboard.

Mall Footfall Intelligence (ZAIN Internship)

Built a time-series forecasting pipeline on **900K mall visit records** using Random Forest with engineered temporal features (lag, cyclical encoding, rolling averages), achieving **$R^2 = 0.95$** , and shipped a 3-page interactive Streamlit dashboard for real-time forecasting.

Core Skills

Generative AI & ML — LLMs, Retrieval-Augmented Generation (RAG), MCP, LangChain, AI Agents, Prompt Engineering, Hugging Face Transformers, PyTorch, TensorFlow, Scikit-learn.

Data & Retrieval — Vector Databases (Pinecone, FAISS and ChromaDB), SQL (PostgreSQL, MySQL, SQLite), Data Preprocessing & Feature Engineering.

Backend & Infrastructure — Python, FastAPI, REST APIs, Docker, Git/GitHub.

Frontend & Visualization — React, Streamlit, Plotly, Power BI, Tableau.

Soft Skills — Analytical Thinking, Problem Solving, Communication, Team Collaboration, Time Management.

Certifications

IBM AI Engineering Professional Certificate

Machine Learning Specialization

Python – Machine Learning – AI Program — The Hope International
